KRIEG DEVAULT LLP ONE INDIANA SQUARE SUITE 2800 INDIANAPOLIS, IN 46204-2079			EXAMINER CANTELMO, GREGG	
			ART UNIT 1795	PAPER NUMBER
			MAIL DATE 01/11/2008	DELIVERY MODE PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b> 10/500,515	<b>Applicant(s)</b> IHRINGER ET AL.	
	<b>Examiner</b> Gregg Cantelmo	<b>Art Unit</b> 1795	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☒ Responsive to communication(s) filed on 17 October 2007.
- 2a) ☒ This action is **FINAL**.                      2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) ☒ Claim(s) 25-56 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 25, 42-48 and 52-55 is/are rejected.
- 7) ☒ Claim(s) 26-41, 49-51 and 56 is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
a) ☐ All    b) ☐ Some \*    c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## **DETAILED ACTION**

### ***Response to Amendment***

1. In response to the amendment filed October 17, 2007:
  - a. Claims 25-56 are pending;
  - b. The previous objections and 112 rejections have been overcome in light of the amendment;
  - c. The previous indication of allowable subject matter has been revoked in light of the amendment to the claims. Previously the claims recited an anode collector layer (cca, cca1, cca2) which was exemplary of a three layer anode collector structure. Thus structure in the construct of the claim was considered allowable. By amendment, the claims no longer require the three layers (cca, cca1, cca2) and thus has broadened the scope of the claimed anode current collector. This broadening of the scope of claim 25 permits finality of this office action, necessitated by the amendment to the claim.

### ***Information Disclosure Statement***

2. The information disclosure statement filed October 17, 2007 has been placed in the application file and the information referred to therein has been considered as to the merits.

### ***Specification***

3. The substitute specification filed October 17, 2007 has not been entered because it does not conform to 37 CFR 1.125(b) and (c) because: the specification does not have page numbers on each page.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 25 is rejected under 35 U.S.C. 102(b) as being anticipated by JP 08-078040 (JP '040).

This rejection relies upon the IPDL machine translation of JP 08-078040, a copy of which has been made of record.

JP '040 discloses a solid electrolyte fuel cell wherein the fuel cell comprises an air electrode 13, solid electrolyte 11 and fuel electrode 12 wherein each electrolyte layer includes both an active material and support material. Each electrode comprises a current collector layer 101/100 on the rear side of each electrode which is further designed in contact with an interconnect plate 102. The current collector region 101/100 defines raised structures which form reactant passages therethrough (Fig. 4 as applied to claim 25).

【図 2】

### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of

the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 42-43, 45 and 52-53 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP '040 as applied to claim 25 above, and further in view of JP 02-239568 (JP '568).

The differences between claims 42, 43 and 45 and JP '040 are that JP '040 does not teach of the anode support layer comprising ceramic fibers or metal fibers (claim 42) in a proportion from 20-40% by volume (claim 43) or wherein the fibers have a diameter between particular ranges microns and the L/d ratio is between particular ranges (claims 45 and 52-53).

JP '568 discloses a solid oxide fuel cell wherein the fuel electrode (anode) includes ceramic fibers (abstract as applied to claim 42) and wherein the fibers have a diameter of 2-5 microns and a length of 10-30 microns (L/d ratio of 5 more as applied to claim 45). The ceramic can be present in an amount from 10-50% (see abstract and prior art claim 2 as applied to claims 43 and 52-53).

The motivation for employing the fuel electrode material of JP '568 is that it restricts or reduces deterioration of cell characteristics.

Therefore it would have been obvious to one of ordinary skill in the art at the time the claimed invention was made to modify the teachings of JP '040 by employing the fuel electrode material of JP '568 is since it would have restricted or reduced deterioration of cell characteristics. The selection of a known material based on its suitability for its intended use supported a prima facie obviousness determination in *Sinclair & Carroll Co. v. Interchemical Corp.*, 325 U.S. 327, 65 USPQ 297 (1945) See also *In re Leshin*, 227 F.2d 197, 125 USPQ 416 (CCPA 1960). MPEP § 2144.07. Regarding the claimed diameters and L/d relationship: Generally, differences in ranges will not support the patentability of subject matter encompassed by the prior art unless there is evidence indicating such ranges is critical. *In re Boesch*, 617 F.2d 272, 205 USPQ 215 (CCPA 1980). *In re Aller*, 220 F.2d 454, 456, 105 USPQ 233, 235 (CCPA 1955). *In re Hoeschele*, 406 F.2d 1403, 160 USPQ 809 (CCPA 1969).

6. Claim 44 and is rejected under 35 U.S.C. 103(a) as being unpatentable over JP '040 as applied to claim 25 above, and further in view of JP 01-197971 (JP '971).

The difference is that JP '040 does not teach of the cathode support layer comprising ceramic fibers.

JP '971 discloses a solid oxide fuel cell wherein the various layers, including the cathode can include ceramic fibers therein (abstract).

The motivation for employing ceramic fibers in the cathode is to improve the mechanical characteristics of the cathode and fuel cell.

Therefore it would have been obvious to one of ordinary skill in the art at the time the claimed invention was made to modify the teachings of JP '040 by including

ceramic fibers in the cathode material of as taught by JP '971 since it would have improved the mechanical characteristics of the cathode and fuel cell.. The selection of a known material based on its suitability for its intended use supported a prima facie obviousness determination in *Sinclair & Carroll Co. v. Interchemical Corp.*, 325 U.S. 327, 65 USPQ 297 (1945). See also *In re Leshin*, 227 F.2d 197, 125 USPQ 416 (CCPA 1960). MPEP § 2144.07.

7. Claim 46 and 54-55 and is rejected under 35 U.S.C. 103(a) as being unpatentable over JP '040 in view of JP '971 as applied to claim 44 above, and further in view of JP 01-197971 (JP '971).

The differences not yet discussed is of the fibers have a diameter between particular ranges each having an L/d ration in a particular range.

JP '568 discloses a solid oxide fuel cell wherein an electrode (anode) includes ceramic fibers (abstract as applied to claim 42) and wherein the fibers have a diameter of 2-5 microns and a length of 10-30 microns (L/d ratio of 5 more as applied to claim 45). The ceramic can be present in an amount from 10-50% (see abstract and prior art claim 2 as applied to claims 46 and 54-55).

While the fibers are disposed in the fuel electrode, the combination of teachings of JP '971 and JP '568 would reasonably suggest dimensioning the ceramic fibers of JP '971, used in the various electrode and electrolyte layers of JP '971 to similar dimensions as that recited in JP '568 with a reasonable expectation that those dimensions would have provided the requisite enhanced mechanical properties provided by the inclusion of ceramic fibers in a given layer of a solid oxide fuel cell.

Therefore it would have been obvious to one of ordinary skill in the art at the time the claimed invention was made to modify the teachings of JP '040 and JP '971 by dimensioning the fibers of JP '971 in the manner suggested by JP '568 since it would have provided the predictable result of providing the requisite enhanced mechanical properties provided by the inclusion of ceramic fibers in a given layer of a solid oxide fuel cell. Generally, differences in ranges will not support the patentability of subject matter encompassed by the prior art unless there is evidence indicating such ranges is critical. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980). In re Aller, 220 F.2d 454, 456, 105 USPQ 233, 235 (CCPA 1955). In re Hoeschele, 406 F.2d 1403, 160 USPQ 809 (CCPA 1969). Regarding the claimed diameters and L/d relationship: Generally, differences in ranges will not support the patentability of subject matter encompassed by the prior art unless there is evidence indicating such ranges is critical. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980). In re Aller, 220 F.2d 454, 456, 105 USPQ 233, 235 (CCPA 1955). In re Hoeschele, 406 F.2d 1403, 160 USPQ 809 (CCPA 1969).

8. Claims 47 and 48 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP '040 as applied to claim 25 above, and further in view of U.S. Patent No. 6,214,485 (Barnett).

The differences are that JP '040 does not teach of the internal reforming arrangement of claim 47 or of the amount of reforming catalyst (claim 48).

Barnett teaches of a direct hydrocarbon reforming fuel cell wherein the anode includes nickel on a ceramic material (YSZ). In a preferred example the nickel

reforming catalyst is in an amount of 10% relative to the anode (Example 11) which is a combination which has reduced carbon formation on the catalyst material at higher operating temperatures.

Therefore it would have been obvious to one of ordinary skill in the art at the time the claimed invention was made to modify the teachings of JP '040 by configuring the anode to be a ceramic-supported nickel catalyst with an amount of catalyst of 10-20% since it would have provided improved direct reforming of a hydrocarbon in the fuel cell and provided an anode that can function at higher operating temperatures without carbon forming on the catalyst material.

***Allowable Subject Matter***

9. Claims 26-41, 49-51 and 56 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Regarding claims 26-29 and 49, none of the prior art of record are held to reasonably teach, suggest or render obvious the invention therein wherein the cathode also has, on its rear face which is designed to come into contact with an interconnecting plate-O), a raised structure which is chosen so as to form gas circulation channels with said interconnecting plate, and in that the raised structures of the anode and of the cathode each comprise a plurality of prominent bumps which are spaced apart from one another, wherein summit surfaces of the bumps of the anode are substantially coplanar and parallel to the-summit surfaces of the bumps of the cathode, the latter likewise

Art Unit: 1795

being coplanar with one another (claim 26). Claims 27-29 and 49 are dependent upon claim 26 and allowable for at least the same reasons.

Regarding claims 30-41 none of the prior art of record are held to reasonably teach, suggest or render obvious the invention therein wherein the front face of the anode on the electrolyte side also has a raised structure.

Regarding claims 50 and 56 none of the prior art of record are held to reasonably teach, suggest or render obvious the invention therein, wherein the front face of the anode on the electrolyte side also comprises raised structures wherein the raised structures of the front faces and/or rear faces of the anode and cathode.

While Hsu, of record shows an anode front face having a raised structure, this arrangement is one manner by which reactant may flow through the electrode. There is no apparent motivation to modify the teachings of JP '040 with that of Hsu to provide reactant flow paths since JP '040 already has channels for flowing reactant therein. Thus it would require a significant reconfiguration of JP '040 to provide the reactant flow channels to the front side and by doing so would not require the flow channels along the backside of the electrode as shown by JP '040. Such a modification, would not have readily appreciated having both the raised structure of claim 25 in combination with the bumps of claim 26, or the raised structure of claim 25 in combination with the further raised structure of claim 30 or the raised structure of claim 25 in combination with the further raised structure of claims 50 and 56. Alternatively Hsu itself does not teach, reasonably suggest or render obvious the configuration of claims 26-41, 49-50 or 56 since Hsu does not teach of the collector layer and interconnect configuration as recited

in claim 25 and even if Hsu were combined with JP '040, the combination would still fail to reasonably suggest or obviate the invention of claims 26-41, 49-50 and 56 since the combination does not reasonably teach or suggest the raised structure of claim 25 in combination with the bumps of claim 26, or the raised structure of claim 25 in combination with the further raised structure of claim 30 or the raised structure of claim 25 in combination with the further raised structure of claims 50 or 56.

Regarding claim 51, none of the prior art of record are held to reasonably teach, suggest or render obvious the invention therein, wherein the material of the porous cathode layer comprises fibers selected from strontium-doped lanthanum manganate (LSM) fibers, strontium-doped lanthanum cobaltate (LSC) fibers and lanthanum ferrocobaltates.

While it is known to use various perovskite materials in a cathode, the prior art of record does not reasonably teach or suggest the cathode comprising fibers of the select materials recited in claim 51. Such additives appear to improve dimensional stability, redox stability (see

Therefore it would appear that claims 26-41, 49-50 and 56 appear novel over the prior art of record.

### ***Conclusion***

10. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

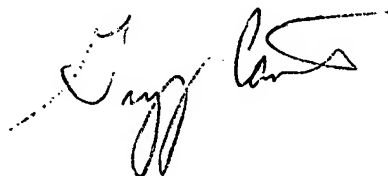

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gregg Cantelmo whose telephone number is 571-272-1283. The examiner can normally be reached on Monday to Thursday, 8:30-6:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Pat Ryan can be reached on 571-272-1292. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
